Text formating for messages

You can put bold, italic or underlined text in messages by encasing the applicable sections of your text with either the , <I> </I> or <U> </U> tags. For example, this text will produce **this text**.

To create a hyperlink (for e-mail or URL) in your message, simply type the corresponding address without any tag. The hyperlink will be created automatically.

Commands

{} represents a required setting, **[]** an optional one.

/!

Recall the previous text typed (command or message).

/announce {message}

Allow the administrator to send an announcement to all users in all chat rooms.

/clear

Clear the messages frame and show only the last 5 messages.

/ignore [-] [user[,user...]]

Avoid displaying messages from an user if nick is specified.
 Set ignoring off for an user when nick and - are both specified, for all users when - is but not nick.
 With no option, this command pops up a window that shows all ignored nicks.

/invite {user}
